

Access Control

The balance of offering a warm welcome and enforcing security at visitor attractions is sometimes a difficult one to achieve successfully.

MaximCheckin ensures that both of these requirements are fully met. By design the system is user-friendly, unobtrusive and quick to use, ensuring the flow of visitors upon entry is uninterrupted and as fast as possible.

Whether your reason for installing access control systems is to track or control admission, or both, we can provide seamless integration to a variety of hardware, from turnstiles to hand-held wireless units.

MaximCheckin links any device in real-time to the Maxim system. This allows you to monitor all entry and exit points, see the current capacity of areas/rooms/events, and watch peaks and troughs happening in real time. This assists with many business-critical and operational aspects of the business, including health and safety audits, as well as monitoring staffing levels. The tracking of customer movements can also be helpful in re-arranging customer flow and the analysis of dwell times.

A host of functional and attractive turnstiles are available including glass, wood and steel, including 'open' turnstiles to make admission even simpler. Because the scanning process is so simple it ensures speed of entry and improves the visitor experience.

As an alternative to a physical barrier, users can carry wireless scanning units to check tickets. This allows for a more personable welcome, greater flexibility and reduced costs.

Operated by your team at the entry point, the scanner is used to read a ticket, which verifies its validity, signals its authenticity or refuses it for entry and records the access against the client/booking. Ticket information, including the address and customer photograph can also be displayed on the scanner allowing for a secondary verification check.

“Since going live with TOR’s ticketing and booking system, our speed of service and customer satisfaction has significantly improved. The aftercare we have received has been second to none.”
